Integration  
Services

The logo consists of the letters 'SD' stacked above 'MS' in a dark red, serif font, enclosed within a square border.

# SDMS DATA INTEGRATOR

## Are You Getting Full Use of Your Data?

Before a health care organization can take full advantage of the wealth of data it has collected, it needs to understand how it all relates together.

Accomplishing the task of setting up such a centralized database requires a combination of clinical and technical expertise that many organizations may not possess. Or, it may be that implementation of such a project through your IM/IT department cannot be accomplished in a cost-effective or timely fashion.

*Data Integrator*<sup>TM</sup> is the SDMS data integration service that sets up a report-ready, patient-level relational database from all your disparate electronic files. SDMS, a pioneer in health care information integration, can provide you with the health informatics experts and health information technologies you need to integrate all your electronic data accurately, comprehensively and effectively...without straining your internal resources.

## Organize All Your Data in One Place

*Data Integrator* gives you one centralized data source merged from claims, medical, administrative, pharmacy and other individual files. Designed to be user-friendly yet full-featured, the *Data Integrator* database will help you:

- Fully analyze medical utilization by individual member

- Save you money on database management initiatives
- Quickly show results by simplifying routine reporting and analysis
- Increase internal expertise Supplement and enhance your own IM/IT resources
- Provide a more accurate source for ongoing assessments of health care utilization, expenditures, practice patterns, membership statistics, etc.
- Enhance existing claims processing systems
- Reduce the effect of data silos within the organization

## How Data Integrator<sup>TM</sup> Works:

Upon receipt of your data in an electronic format, we will:

- Clean and code the data to meet HIPAA requirements
- Create a relational database that can be accessed from our server or incorporated into your PC database applications
- Summarize the contents of the database with a comprehensive data analysis
- Provide a snap shot in time for conducting analyses/reporting processes

## What You'll Receive

We will present you with the merged data, in electronic format, at your site. **Your Data**

## **Integrator**<sup>TM</sup> package includes:

- Integrated Data File
- Data Dictionary
- Summary Analysis Reports, which provide information such as:
- Demographics

- Medical Expenditures

- Utilization Patterns
